

## **EVENFill**

The new Oxbo EvenFill system delivers consistent flat or lug weights to increase efficiency in the processing plant.

EvenFill is easy to use; simply set the desired weight in the display. The indicator light turns orange to show that the lug or flat is nearing the desired weight; when the lug or flat reaches the desired full weight, the light turns green. The EvenFill system eliminates the guess work and delivers accurate, consistent weights. When combined with automatic flat tipping technology, EvenFill can improve the efficiency of the IQF process in the plant.

New Oxbo 9140 and 7440 harvesters are “EvenFill ready” and the option can be added at the time of purchase. Oxbo also offers retrofit kits for model 9000, 9120, and 7420 harvesters as well as a kit for Littau side driver and top loader platforms, allowing customers to equip a mixed fleet with new technology.

Oxbo continues to develop and deliver new technologies to increase efficiencies and provide more data in the berry market.
