FRESH MARKET BERRY HARVESTING

Compatible with the Oxbo 7440, 8040, 8140 and 7450 the Oxbo SoftSurface kit has proven to reduce internal bruise damage and extend the shelf life of mechanically harvested blueberries for fresh market.

SoftSurface has a field tested design, with patented, durable molded catchers and suspended soft surfaces to protect fruit. The food safe suspended soft surfaces under the picking head reduce the impact from the first berry drop, can be easily removed, and cover the hard surface belting. The fabric sections are also easily replaceable.

Oxbo is committed to developing solutions that streamline operation and increase efficiency for berry growers. Oxbo's integrated technology is part of a full system of interconnected decisions and activities, each one fine-tuned to deliver the highest quality berries. Please review with your Oxbo Dealer or Oxbo location to ensure your blueberry fields are set up for success with the Oxbo SoftSurface kit. Autosteer is encouraged for longevity.

Contact your local Oxbo dealer for more information or visit OXBO.COM

The Oxbo SoftSurface Kit is available as a retrofit on all 7440 and 8040s. Other models are not available at this time. **Production lead time is 3 months from order date.**

KIT INCLUDES THE REMOVABLE SOFTSURFACE COMPONENTS
